

- 
- A scatter plot showing the distribution of various system states. The plot features several distinct clusters of points, each color-coded according to a legend. The 'Normal' cluster (orange) is the largest and most dispersed, occupying the right half of the plot. The 'SurroundingEnvironment' (blue) and 'HardwareFault' (green) clusters are smaller and more compact. The 'ParamViolation' (red) cluster is located on the left. The 'RegulationViolation' (purple) and 'CommunicationIssue' (brown) clusters are small and isolated. The 'SoftwareFault' (pink) cluster is located at the top. The 'SoftwareFault' cluster also includes several significantly larger, semi-transparent orange points, suggesting a relationship or overlap between these two categories.
- SurroundingEnvironment
 - Normal
 - HardwareFault
 - ParamViolation
 - RegulationViolation
 - CommunicationIssue
 - SoftwareFault
